

JRZ 3 Way

Triple Adjustable Motorsport Damper

JRZ Suspension is proud to offer our Triple Adjustable racing damper.

Advancing the design of our Double Adjustable further, the JRZ Triple Adjustable utilizes the same piston design while adding function to the Triple Adjustable canister.

Like the Double Adjustable, the Triple Adjustable has a wide adjustment range with precise, even adjustments engineered to enable the chassis tuner to make significant, predictable changes every time.

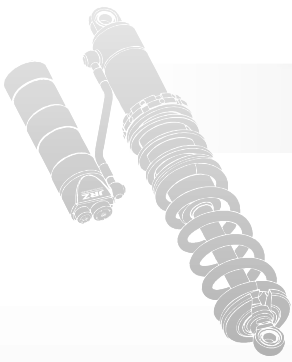

Compression adjustments are separated into the high speed and low speed piston velocity ranges. This level of adjustment creates an environment for precise tuning.

The mono tube Triple Adjustable Damper offers a wide adjustment range allowing the user to tailor the damper to driver, track and vehicle.

The JRZ Triple Adjustable Damper is available as a complete kit with springs and mounting hardware.

Custom applications are available.

Features

- Large adjustment range
 - 6 clicks low speed compression
 - 14 clicks high speed compression
 - 24 clicks rebound
- High response piston
- Precise canister
- Adjustable gas pressure

An easy to use system, the Triple Adjustable Damper enables the chassis tuner to achieve the desired mass control and handling with precision.

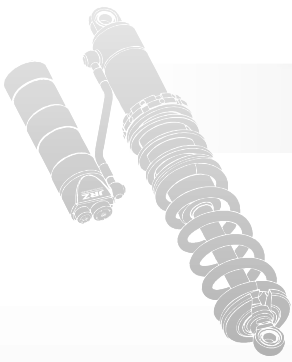

Digressive high speed compression blow off adjustment allows for a stiff compression valving while maintaining smooth response and without losing traction. The low speed adjustment is a powerful tool that enables the chassis tuner to maximize grip and optimize vehicle balance.

The result is a damper that provides ultimate chassis and ride height control with maximum mechanical traction.

The JRZ standard large 22mm piston rod works in concert with the high speed valving to maximize blow off valve response, achieving solid chassis control without using a high spring rate. JRZ Triple Adjustable dampers are shipped with 360 degree swivel hoses and are available with zero-inclusion quick disconnects for mounting canisters within the chassis for ease of adjustment accessibility.

Our proven piston has been developed to deliver a smooth and responsive damping characteristic. To customize track to tracks setups and tailor the chassis to the driver; the JRZ Triple Adjustable Damper has an adjustment range able to provide damping to spring configurations ranging from 1.5-GHz on vehicles with moderate to large aerodynamic loads.

Even with a large range, each adjustment is designed to be a small, even step giving precision and confidence when making changes.

The JRZ Triple Adjustable takes you to the next level. Dedicated racing cars with experienced drivers deserve the professional technology JRZ delivers. Valving designed and innovated by JRZ Suspension Engineering, the JRZ Triple Adjustable is shipped as a custom configuration always tailored to the customer's needs, and always comes with our world renowned personal service.

Recommended applications

- Professional racing mandating 3 way adjustment
- Experienced Club Racing

Benefits

- Precise control of the chassis and unsprung masses
- Excellent tyre wear
- Easy to change configurations
